EARLY SURECROP

HYBRID CUCUMBER

58 Days — Disease Resistant Slicing Type

ALL-AMERICA WINNER

A.A.S. Bronze Medal for 1951

ALL-TIME ALL-AMERICAN 1953

Surecrop is no longer a novelty, but one of the most widely sold varieties.

As a commercial market-gardener item it is used from Canada to Mexico on repeat orders. As a home garden favorite it has no equal.

Fruits slender, blunt ends, 8 to 9 inches long, 2½ inches in diameter, holds its dark green color well after picking. Flesh is crisp, white and unusually delicious. Small seed cavity.

Vines outstandingly vigorous, with large protective leaves. Its resistance to Mosaic and Downy Mildew keeps the vines alive and productive long after most varieties have wilted. Suitable for market grower, greenhouse, as well as home garden use. May be used for both pickling and slicing by the home gardener. Photos available.

Early Prolific

HYBRID TOMATO

We are still "topping" the trials in various State Colleges around the country. The West Virginia University report is the latest one to come in. Early Prolific had the highest yield—in competition with the major competing hybrids now being offered.

An early, 60-day hybrid, in maturity class with Earliana, but with larger, smoother fruits, greatly increased yield, and better vine coverage.

Best adapted to eastern and northern U. S. Suitable for staking or trellising. First produced in 1948, Early Prolific continues to be one of our best Hybrids. A true Fl.

Early Hybrid 17x21

HYBRID TOMATO

One of the first Hybrid Tomatoes to be produced from a male-sterile parent. We have been selling this for several years but this is the first year it has been offered in our catalog. Its continued excellent performance as a "very first early" demands its general release. Several days earlier than Earliana or Valiant, but with larger fruit. Open vine. Good dark red color, excellent flavor. An outstanding home-garden tomato for central, eastern and northern U. S.

Early Delicious

HYBRID TOMATO

This Hybrid won first place in yield in competition with 72 Hybrid and Standard varieties in one eastern college trial, and was awarded a No. 1 rating.

Widely adapted. Strong, vigorous vine, medium covering, indeterminate. Fruit medium large, intermediate globe, color deep dark red, very smooth and free from cracking, uniform in shape and size, thick fleshed and good mild flavor.

An Extra Early—55 days. Tests in Kansas, Wisconsin, and Pennsylvania show it to be an outstanding "Early" with wide adaptation. Official yields at over 20 tons per acre.

Contract for Special Crops

Date _____ 195__

This is to certify that _____

Street _____ Postoffice _____ State _____

has placed an order for contract growing of seed, with the Peto-Hollar Co., as follows:

THE LIBRARY OF CONGRESS

Early Giant Hybrid Tomato

Our best hybrid for combination of earliness and large fruit size. No other hybrid can equal it for size, and only the ponderosa types, among the standard varieties, are larger. Early Giant averages about one-third larger than Rutgers while being also earlier and more productive.

Tested as 49-48. Trial reports available from Kentucky University and Riverhead Long Island Experiment Stations.

Maturity varies with climate. Minnesota University reports Early Giant only two days later than Early Chatam. In other areas it is medium early. Good red color, fine quality, moderately open vine habit.

Breeders HYBRID TOMATO

An early mid-season tomato breed for the canner and green-wrap shipper. Its dark red color both inside and out is outstanding. Ships well but has no hard core. Best adapted to U. S. coastal areas, both East and West. But has also been used in Central U. S. with excellent success. Deep-round fruit shape, very smooth, modernately good vine coverage.

Largo HYBRID TOMATO

WILT RESISTANT

Main Crop — 70 Days

Widely adapted, even to areas where sunburning of tomatoes is severe. Best vine coverage. Very Strong F1 Hybrid Vigor. Larger than Rutgers, outyielding is by over 50 per cent in University conducted trials. Earlier than Rutgers.

This is the hybrid for your home garden customers who want large fruit size and maximum yield combined with quality. Fruits are globular to slightly flattened, bright red, solid fleshed and excellent flavor. Resistant to Fusarium wilt. Produces heavily over a long period of time. Suitable for staking and trellising.

Dixie Queen

Hybrid Watermelon

Early — 82 Days — Wilt Resistant

A true first generation Hybrid produced by hand controlled pollination; the cross of two carefully inbred and selected parent lines. Slightly earlier than regular Dixie Queen. Very uniform and vigorous growing. Strong resistance to fusarium the common wilt of watermelons. It produces from mid-August until frost.

Outstanding for its crisp, low fibre flesh, good strong watermelon flavor and for its excellent shipping and keeping quality. Very thin but extra tough rind, slightly darker in color compared to Dixie Queen. Fruit size 30 to 50 pounds. Seeds dark color.

Granex HYBRID ONION

First produced by Dr. H. A. Jones, U.S.D.A., Beltsville, Maryland. Being used commercially in those areas where Excel is popular. Improved shape, better keeper, official yield 50 to 60 per cent greater than Excel. Supply Limited. Write for details.

Standard ONION VARIETIES

Available on contract and for spot sales. Write quantity and varieties and we will quote.

*Write for Our Prices on Other Varieties
Your Special Strains Increased.*

HALE'S BEST JUMBO
Our strain is large and uniform

CONTRACT VINE SEEDS

Prices are F.O.B. growing station. Bags extra at market value. Terms are net 30 days to firms of approved rating, one and one-half percent 10 days from invoice date. These seeds sold under the limited warranty clause of the American Seed Trade Association.
